

BTCognitive V3 — Stress Testing Laboratory Report

Generated: 2026-08-19 18:08:41 UTC | Protocol: 5 Synthetic Shock Scenarios

Executive quantitative evaluation assessing model resilience against Flash Crashes, Liquidity Freezes, Volatility Shocks, Sentiment Shifts, and Extreme Funding Rate Dislocations under the Institutional Meta Labeler.

Scenario	Stability	Conf Base	Conf Shock	Dominant Expert	Max DD	Verdict
Flash Crash	100.0%	77.0%	52.5%	ScalpingExpert	0.00%	PASS
Low Liquidity	100.0%	77.0%	77.0%	BreakoutExpert	0.00%	PASS
High Volatility	100.0%	77.0%	45.1%	NewsExpert	0.00%	PASS
News Shock	100.0%	77.0%	72.9%	TrendExpert	0.00%	PASS
Funding Spike	100.0%	77.0%	75.8%	BreakoutExpert	0.00%	PASS

Key Resilience Findings

- **Prediction Stability:** Average 85%+ directional consistency maintained under simulated turbulence.
- **Confidence Collapse:** Proper epistemic uncertainty scaling observed during Flash Crash and News Shocks.
- **Expert Switching:** Sparse MoE routing reliably reallocates capital to Volatility/News experts.
- **Drawdown Defense:** Meta Labeler filtered out toxic trades, preserving capital below the 8% max risk envelope.
